Obsah

Tool plain2beamer

About this program

- ▶ its input is plain file (see next slide for sample):
- ▶ outputs \LaTeX beamer file
 - ⇒ two commands generates presentation in PDF

Example of heading

```
title=My presentation
author=me
date=now
version=1.0
institute=My company

% latex headings, definitions, ...
\usepackage{amsmath}

\mode<presentation> {
  \usetheme{Pittsburgh}
  \usecolortheme{sea}
}
```

Example of content

#Slide header

- first bullet
- another one
 - subitem

Normal text goes here.

#

This is headerless slide.

\$\rightarrow\$ with something more ...

#Last slide

- no file ending needed

Features

- ▶ accepts following:
 1. sections and subsections
 2. slides with title or without
 3. unordered lists with subitems
 4. custom bullets (in this case just simply numbers)
 5. everything else is considered as plain \LaTeX code
